

# How to Reverse H/C Ceramic Disc Stem-Model 10472

- When installing a stem for a two-handle faucet, some brands have one common stem that will fit both the hot and cold water. These H/C stems will require you to "reverse" the handle stop to change the stem from hot to cold in order to fit each side of the faucet. Here are some steps to help guide you through reversing a Ceramic Disc stem for American Standard:

- Remove the c-clip from the stem

- With a flat head screw driver, loosen the handle stop

- Lift the handle stop up and rotate it to the other bumper, without turning the stem

- Lower the handle stop and replace the c-clip

- Now you are ready to install the stem into the faucet
